

Indoor air sealing of the school building | Forssa

Description

The school building has indoor air pollution and heat leaks. Floor moldings removed from the structures and larger gaps sealed with Masa sealing compound before ElaProof Indoor installation. Model sealing made after ElaProof Primer treatment, which was checked with tracer tests before starting the actual sealing work. The work has been carried out in accordance with Paloniitty Oy's plans and the work instructions of the product manufacturer.

Project information

Client: Forssa Vocational Institute

Project: Indoor Air Sealing

Address: Forssa, Finland

Material: Concrete + others

Contractor: Rakennus Timo Pekka Oy
