

Warehouse floor 30 m² | Mäntsälä, Finland

Description

The floor coating of the warehouse in the new location was carried out with ElaProof products. The damp concrete floor was treated with ElaProof Primer. The treatment improves the adhesion of ElaProof to the substrate and blocks the pores of the substrate. The floor was leveled with ElaProof+SAND Floor Coating. As the last surface, the customer chose ElaProof FLOOR X, which was installed according to the work instructions. The elegant finish was made with ELACOAT TopCoat RAL 7001 topcoat.
